in the immense literature on globalization the work of roland robertson stands out in particular his insistence that globalization manifests itself primarily as glocalization the simultaneity of the global and the local of homogenization and heterogenization continues to influence how a wide variety of observers understand the process including those who contest it in honour of robertson s lifetime contributions this volume brings together a set of essays that demonstrate the cogency of his approach point out directions in which it can be further developed and illustrate the insight it can provide in topics as varied as religion football wine morality and ufos contributors include peter beyer john boli didem buhari gulmez rebecca catto richard giulianotti ulf hannerz david inglis paul james habibul haque khondker anne sophie krossa frank lechner kristian naglo john h simpson manfred b steger and george m thomas

the nobel prize winning father of modern portfolio theory returns with new insights on his classic work to help you build a lasting portfolio today contemporary investing as we know it would not exist without these two words portfolio selection though it may not seem revolutionary today the concept of

examining and purchasing many diverse stocks creating a portfolio changed the face of finance when Harry Markowitz devised the idea in 1952. In the past six decades, Markowitz has risen to international acclaim as the father of modern portfolio theory (MPT) with his evaluation of the impact of asset risk diversification and correlation in the risk return tradeoff. In defending the idea that portfolio risk was essential to strategic asset growth, he showed the world how to invest for the long run in the face of any economy. In risk return analysis, this groundbreaking four-book series by the legendary economist and Nobel laureate returns to revisit his masterpiece theory, discuss its developments, and prove its vitality in the ever-changing global economy. Volume 2 picks up where the first volume left off with Markowitz's personal reflections and current strategies. In this volume, Markowitz focuses on the relationship between single period choices now and longer run goals. He discusses dynamic systems and models the asset allocation glide path, inter-generational investment needs, and financial decision support systems, written with both the academic and the practitioner in mind. This richly illustrated volume provides investors, economists, and financial advisors with a refined look at MPT, highlighting the rational decision making and probability beliefs that are essential to creating and maintaining a successful portfolio today.
