it prevents function overriding by derived classes but if this is the case then isn t it enough
to declare

final
final etymotic

a final
x final

the quote above is better in context the reason it gives is that interface variables are
intended to be java constants the quote was just elaborating on why such a constant would
be static and final

in java we use final keyword with variables to specify its values are not to be changed but i
see that you can change the value in the constructor methods of the class again if the
variable is

final final java final

may 20 2018 both final and const prevent a variable from being reassigned similar to how final works in java or how const works in javascript the difference has to do with how memory is allocated

jul 27 2012 104 final indicates that the value of the variable won t change in other words a constant whose value can t be modified after it is declared use public final static string when you want to
