model engineering for simulation provides a systematic introduction to the implementation of generic normalized and quantifiable modeling and simulation using devfs formalism it describes key technologies relating to model lifecycle management including model description languages complexity analysis model management service oriented model composition quantitative measurement of model credibility and model validation and verification the book clearly demonstrates how to construct computationally efficient object oriented simulations of devfs models on parallel and distributed environments guides systems and control engineers in the practical creation and delivery of simulation models using devfs formalism provides practical methods to improve credibility of models and manage the model lifecycle helps readers gain an overall understanding of model lifecycle management and analysis supported by an online ancillary package that includes an instructors and student solutions manual

the fourth siam international conference on data mining continues the tradition of providing an open forum for the presentation and discussion of innovative algorithms as well as novel applications of data mining this is reflected in the talks by the four keynote speakers who discuss data usability issues in systems for data mining in science and engineering issues raised by new technologies that generate biological data ways to find complex structured patterns in linked data and advances in bayesian inference techniques this proceedings includes 61 research papers

the proceedings of the 4th valencia international meeting on bayesian statistics presented in this book reflect state of the art developments in the theory application and computation of bayesian

methods

some of the topics of the 27 papers are common mistakes committed by medical scientists using statistical techniques prediction of ankle fractures modeling the number of epidemic meningitis deaths in turkey and population issues in crossover trials other topics include step down logistic regression for feature selection statistical investigati

section one healthcare quality the healthcare industry is constantly evolving and with it comes the need for quality professionals to ensure that patients receive the best possible care this section will introduce the concept of healthcare quality and the various aspects that contribute to it we will discuss the importance of value in healthcare and the shift towards a value based system we will also introduce the principles of total quality management and how they can be applied in the healthcare setting to improve the quality of care section two organizational leadership effective leadership is essential in the healthcare industry as it plays a crucial role in the overall quality of care provided to patients this section will delve into the importance of leadership in the healthcare system and how it affects the quality of care we will discuss different leadership styles and the role of strategic planning and change management in healthcare organizations we will also cover the concept of a learning organization and the importance of effective communication in the quality improvement process section three performance and process improvement continuous improvement is key to ensuring that patients receive the highest quality of care this section will introduce the essential components of the performance and process improvement process including the role of quality councils initiatives and performance improvement approaches we will discuss the use of quality performance improvement plans risk management and occurrence reporting systems to identify and address potential issues we will also cover the importance of infection prevention and control utilization management and patient safety in the quality improvement process section four data analysis data plays a crucial role in the healthcare industry as it allows quality professionals to identify trends and patterns and to measure the effectiveness of interventions this section will introduce the basics of data analysis in healthcare including different types of data basic statistics and the use of statistical tests to measure the significance of findings we will also discuss the importance of data definition and sources as well as the various methods used to collect data in the healthcare setting section five patient safety ensuring patient safety is a top priority in the healthcare industry and this section will delve into the various strategies and approaches used to improve patient safety we will discuss the role of risk management and occurrence reporting systems in identifying and

addressing potential issues as well as the importance of infection prevention and control and medication management in ensuring patient safety we will also cover the use of adverse patient occurrence reporting and the global trigger tool to identify and address potential safety concerns section six accreditation and legislation compliance with regulatory standards is essential in the healthcare industry and this section will introduce the various accreditation and legislation bodies that oversee the quality of healthcare services we will discuss the role of organizations such as the joint commission and the centers for medicare and medicaid services in ensuring compliance with standards as well as the importance of adhering to laws and regulations such as hipaa and the affordable care act we will also cover the appeal process for addressing patient concerns and the importance of maintaining confidentiality privacy and security in the healthcare setting

written by engineers it uses a practical applied approach that is more oriented to engineering than any other text available instead of a few engineering examples mixed in with examples from other fields all of its unique problem sets reflect the types of situations encountered by engineers in their working lives
