aging is one of the major risk factors for the onset and progression of various neurodegenerative diseases neuroinflammation is a common feature of virtually every central nervous system disease and is acknowledged as a likely mediator of cognitive impairments systemic inflammation levels are augmented with advanced age and neurodegeneration the influence of age on neuroinflammatory responses including glial activation increased production of proinflammatory cytokines and aberrant neuronal signaling could magnify the deterioration of the central nervous system microenvironment in disease and may contribute to enhanced cognitive impairment this ebook is a collection of highly informative original research articles providing comprehensive aspect of neuroinflammation and possible therapeutic interventions in rescuing cognitive impairments

as the aging population degree is deepened cognitive impairment has become a globally recognized public health problem as an intermediate state from normal cognition nc to alzheimer s disease ad mild cognitive impairment mci has a highly variable cognitive trajectory which contains three outcomes 1 progression to ad and other types of dementia 2 maintaining stability 3 reversal to nc reversal of cognitive function can be achieved by taking positive and effective measures current studies mostly focus on factors affecting mci to ad world health organization and alzheimer s disease international have also proposed relatively mature guidelines for risk factors however there are still some influencing factors that have not yet formed a unified conclusion in addition there are fewer studies and no consensus on the influencing factors for mci to nc current forms of intervention for mci are mainly non pharmacological interventions and there is a lack of randomized controlled trials with larger sample sizes and longer intervention periods to confirm the effect of pharmacological and non pharmacological interventions the purpose of this study is to explore the factors that influence the transition from mci to

ad or nc in aging adults and to examine how the influencing factors make the cognitive function of aging adults with mci deteriorate improve or even reverse to nc and how are their reversal rates this includes effective measures proven through pharmacological and non pharmacological intervention studies and their impact on reversal influence factors include but are not limited to demographic factors age socioeconomic status education lifestyle smoking alcohol consumption physical activity nutrition social participation mental health depression loneliness diseases hypertension diabetes sleep disorders biological markers □ amyloid tau protein and pharmacological factors cholinesterase inhibitor a□ monoclonal antibodies drugs to rebalance the gut flora etc and submission of research results based on intervention trials is encouraged

for test and measurement courses this volume introduces prospective teachers to all of the elements of measurement and assessment that are essential to good teaching including the techniques needed to create use evaluate and interpret the full spectrum of both published and self created assessment vehicles
