the purpose of this book is to offer a more systematic and structured treatment of the research on accounting based valuation with a primary focus on recent theoretical developments and the resulting empirical analyses that recognize the role of accounting information in making managerial decisions since its inception valuation research in accounting has evolved primarily along an empirically driven path in the absence of models constructed specifically to explain this topic researchers have relied on economic intuition and theories from other disciplines mainly finance and economics as a basis for designing empirical analyses and interpreting findings although this literature has shed important light on the usefulness of accounting information in capital markets it is obvious that the lack of a rigorous theoretical framework has hindered the establishment of a systematic and well structured literature and made it difficult to probe valuation issues in depth more recently however progress has been made on the theoretical front the two most prominent frameworks are i the linear information dynamic approach and ii the real options based approach which recognizes managerial uses of accounting information in the pursuit of value generation this volume devotes its initial chapters to an evaluation of the models using the linear dynamic approach and then provides a synthesis of the theoretical studies that adopt the real options approach and the empirical works which draw on them the book also makes an attempt to revisit and critique existing empirical research value relevance and earnings response studies within the real options based framework it is hoped that the book can heighten interest in integrating theoretical and empirical research in this field and play a role in helping this literature develop into a more structured and cohesive body of work value is of ultimate concern to economic decision makers and valuation theory should serve as a platform for studying other accounting topics the book ends with a call for increased links of other areas of accounting research to valuation theory
