the law of non contradiction that no contradiction can be true has been a seemingly unassailable dogma since the work of aristotle in book gamma of the metaphysics it is an assumption challenged from a variety of angles in this collection of original papers twenty three of the world s leading experts investigate the law considering arguments for and against it and discussing methodological issues that arise whenever we question the legitimacy of logical principles the result is a balanced inquiry into a venerable principle of logic one that raises questions at the very centre of logic itself the aim of this volume is to present a comprehensive debate about the law of non contradiction from discussions as to how the law is to be understood to reasons for accepting or re thinking the law and to issues that raise challenges to the law such as the liar paradox and a dialethic resolution of that paradox one of the editors contributes an introduction which surveys the issues and serves to frame the debate this collection will be of interest to anyone working on philosophical logic and to anyone who has ever wondered about the status of logical laws and about how one might proceed to mount arguments for or against them
